#### Directions for use:

Clean the substrate of oil stains and bond inhibiting compounds. Also remove any loose particles. dirt, dust, and laitance.

Ensure that the surface is flat (hard and rigid) for the given application.

Ensure that the surface is well saturated before application in the case of comentatious substrates.

Gradually add powder to water in (specified mixing ratio) and mix it to a smooth workable paste

Always add powder to water

After mixing allow the paste to stand for 2 minutes for it to mature

Do not attempt to extend the pot life by adding the more water to the mix

Apply adhesive over the surface using the straight edge of the notched towel. If the adhesive is bottered to the tile, then ensure proper coverage of tile surface to avoid veids.

Firmly press the tile into After be d accel initial bonding.

After 24 hours grouting can be done on tiles and slones,
